

International Clearspan Tents

INSTALLATION

ANYWHERE IN THE WORLD

ICT prefers to have a hand in the installation of the buildings that we manufacture. The main reason for this is to ensure that the building is installed once, the right way. Our crews are properly trained and experienced to safely and efficiently install any fabric structure we manufacture. If a client already has their own crew in place, we still recommend that ICT provides at least one ICT Supervisor to assist in facilitating the successful erection and completion of our fabric structures.

Our crews are experienced in working long days on time sensitive projects and are certified to use all the equipment necessary to safely erect any ICT building. Our site supervisors have the ability to work well with client's staff in bad weather, remote locations and rough live/work conditions. It's all part of the job.

All of our installers have passports and are experienced in International travel. ICT requires that at least one member of the client's on site crew speaks English and can act as an efficient translator should the need arise.

ICT crews and/or single supervisors communicate with the client prior to the shipping of the fabric structure to establish an attainable build timeline and confirm equipment required, labor needed etc.
